Education

Texas A&M University, Mays Business School

Texas, USA

Master of Science in Management Information Systems

Aug 2026 – May 2028

SPPU, D.Y. Patil College of Engineering

Pune, India

Bachelor of Engineering in Information Technology

Aug 2019 – July 2023

Experience

Kotak Mahindra Bank

India

Associate II Technologist

Apr 2026 – July 2026

- Developed ETL workflows using SQL and Apache Airflow to transform and load 1M+ records daily into Amazon Redshift, accelerating analytics workflows by 35% and enabling timely ML scoring models
- Orchestrated end-to-end data pipeline scheduling, monitoring, and execution using Apache Airflow, ensuring data reliability and consistency for analytical reporting and business insights
- Leveraged AWS EMR Studio for large-scale data processing and scorecard generation, supporting machine learning operations and strategic decision-making

Jio Platforms Ltd.

India

Cloud Operations Engineer

Jan 2024 – Mar 2026

- Executed UAT deployments for internal PaaS components across hybrid Kubernetes clusters, ensuring 99.5%+ configuration accuracy and production readiness through comprehensive lifecycle management
- Reduced deployment failure analysis time by 30% through automated SQL and Python-based provisioning health checks, while troubleshooting issues using Kubernetes logs, pod events, and system metrics
- Validated DBaaS and DRaaS failover testing and environment readiness checks across Azure Stack HCI and Red Hat OpenStack (ROS), maintaining high availability and operational stability for application onboarding
- Led cross-functional defect management and daily review meetings, driving a 20% faster issue resolution and providing leadership with improved visibility into system-wide operations
- Partnered with development, QA, and infrastructure teams to validate release readiness and coordinate production rollout schedules

Projects

Cloud Data Ingestion Pipeline

Sept 2026 – Present

- Provisioned a virtualized Ubuntu Server environment on VMware to host and run the pipeline, managing Linux system administration (users, permissions, services, networking)
- Designed and built a data ingestion pipeline that extracts public datasets via Python, validates file/schema quality, and stores partitioned raw data in Amazon S3 using a raw/clean/rejected zone architecture
- Orchestrated scheduled ingestion and transformation workflows using Apache Airflow, with downstream SQL querying via AWS Athena

Uber Ride Data Analysis

Dec 2025 – Jan 2026

- Analyzed 100K+ ride records using Python and SQL to identify demand-supply gaps, uncovering 12-15% potential revenue uplift through optimized driver allocation during peak hours
- Built Tableau dashboards visualizing key metrics: peak-hour demand, driver utilization, and revenue per driver hour
- Formulated and tested a multi-factor hypothesis on fare variability – analyzing the combined effects of time of day, location, and driver availability on pricing – to explain demand-supply gaps and identify revenue uplift opportunities

Skills, Activities & Interests

Cloud & Infrastructure: AWS, Azure HCI, Kubernetes, Docker, Linux

Languages & Scripting: Python, SQL

Data Analytics: Tableau, Excel, ETL

Tools: Git, Apache Airflow, EMR Studio

Certifications: IBM Data Analyst Professional Certificate (Coursera); Kubernetes Infrastructure Certification (LinkedIn Learning); Docker Essentials Foundation (LinkedIn Learning)

Interests: Cloud Technologies, Data Analytics, Product Management, Technology Consulting, Running, Cricket, Travel, Exploring New Places
